AB Oil/water emulsions are prepared by shake mixing oils, especially perfumes, with

strong alkali ion water, i.e. highly reductive water as dispersion media. The emulsions are manufactured without using surfactants.

PRAI	JP 2005-25665		20050105				
AB The treatment method for sulfuric acid pitch, which is a harmful waste							
generated in refining light oil, involves solubilizing the pitch by adding							
	electrolytically produced alkaline water (so-called strongly reductive						
water); emulsifying the resulting pitch in form of a							
fluid with a low d.; oil-water separating the fluid; and oxidizing the							
separated							

water-containing oil in sludge-like state by wet oxidation or wet catalytic oxidation. The harmful sulfuric acid pitch is efficiently and economically detoxicated.

PRAI	JP 2001-60431		20010305		

AB The method is carried out by mixing liquid fuel containing PCB and liquid hydrocarbon with a reductive water having lowered redox potential at -100 to -250 mV, at 5-20 volume%, boiling under decreased pressure for emulsion, combustion of the emulsion fuel in a main burner of the 1st combustion chamber to form a mixed flow to be introduced into a 2nd combustion chamber, then injection of flame from the 2nd burner in the 2nd combustion chamber for secondary combustion, to prevent formation of dioxin in flue gas.
